Projects

Rosetta Capstone

Nov. 2018 to Dec. 2018

A realtime, interactive learning platform that uses socket technology to stream an ESL classroom built to serve non-english speaking students; main audience being the immigrant community. This web application intends to offer live-streamed speech translations for each student in their selected translations, and text-to-text translations from student to teacher.

Streaming service offered through Simple WebRTC, chatbox built with socket.io, translation service used with Google Cloud Translation integration, and authentication built with Google OAuth 2.0 via passport.js library and json-web-token. Web Application built with the NERDS stack

Dig Inn Sales/Labor Projection Tool

Oct. 2018 to Nov. 2018

A financial management tool for Dig Inn to manage both sales and labor projections that allow users to edit and view data per store. The application was built with Google App Maker with Google BigQuery integration to serve projection data - via Furey Financial Services LLC.

GraceShopper

Oct. 2018 to Oct. 2018

A flower market eCommerce website that uses Node/Express on the backend, PostgreSQL/Sequelize as the DBMS, and React/Redux on the frontend. It is built with a native search engine, pagination through products, and a step-by-step process for adding, editing, and confirming cart orders. Third party integrations include Stripe as a payment system, JWT for authentication, and the Material UI library for design.

LitReviews Digest

Oct. 2018 to Nov. 2018

A book reviews aggregator that integrates Google Books, Penguin Random House, NY Times Books, iDreamBooks, and Google Maps public APIs. It is built with Node/Express on the backend, PostgreSQL/Sequelize as DBMS, and React/Redux on the frontend. It has a native search engine that pulls information from each API for data on book reviews and use the maps integration to search for a bookstore. Authenticated users can bookmark reviews in history for later viewing.

Tula Product Order Tool

Sept. 2018 to Oct. 2018

A product order management tool for Tula clients to create product orders. Administrators, clients, and shippers have access to the application to track orders and communicate at each stage of shipping process. This was built with Google AppMaker with an integration with the Gmail App - via Furey Financial Services LLC.
